# Materials Design for Transition

POLITECNICO  
MILANO 1863

materials design  
for transition

## What is the exhibition?

This exhibition presents a collection of Master's thesis projects developed under the guidance of Prof. Valentina Rognoli, Prof. Giovanni Maria Conti, Sonia Massari, Daniele Tamborini, and the Materials Design for Transition group members.

The showcased works follow a **material-driven design approach**, ranging from **artifacts and 3D printing filaments** derived from food waste to **underwater installations** designed for ecological restoration. Together, they demonstrate how materials can act as active agents in shaping more sustainable futures.

## Who are we?

Materials Design for Transition is an interdisciplinary research group adopting a material-driven design (MDD) approach to explore materials and processes as drivers of regeneration and transitions toward sustainability.
